

Private networking made seamless.

Skyriver PRIVATE NETWORK™

- Private & secure networking
- Customize bandwidth for each location
- Leverages MPLS
- Supports QoS
- Performance guaranteed
- Responsive 24/7 technical support
- Easily integrates with your network
- Cost effective, scalable solution
- Provisions in days

One service, one network, and one technology does it all.

Skyriver Private Network will connect all of your business locations privately, securely and dependably, while eliminating all of the rigid and painful characteristics associated with the implementation of traditional wired services.

Delivered via Skyriver private cloud, and supported with our 24/7 knowledgeable and responsive technical support teams, you can forget about managing multiple vendors, additional routers, network complexities and intolerable mega call center IVRs.

Our high performance, fully redundant fixed wireless service is engineered for reliable high-capacity voice and data transport. We have built numerous gigabit connections utilizing leading-edge core routers with dynamic routing for extreme reliability and performance. Utilizing MPLS, we keep your sensitive data and voice traffic private and secure.

Designed for your present, and future needs.

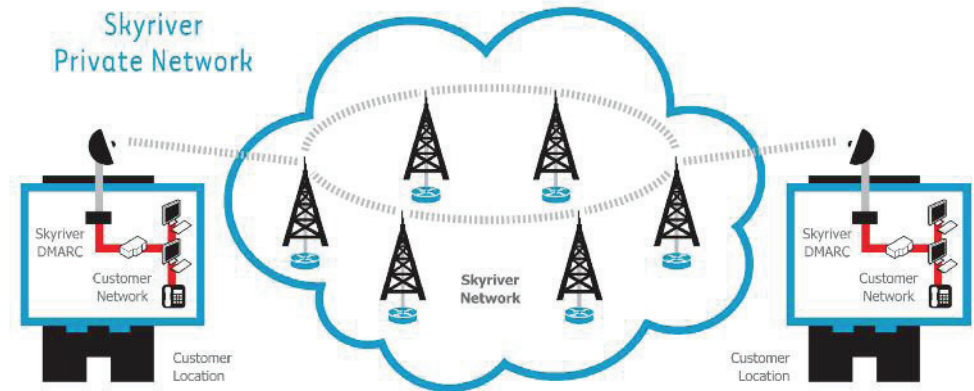

Skyriver Private Networking enables you to easily connect as many business locations as you desire. Point-to-point (P2P) and point-to-multipoint (P2MP) dedicated connections are easily scalable up to GigE.

Skyriver PRIVATE NETWORK™

Rapid installation and easy integration.

We can provision your Skyriver Private Network service in as little as a few days. Because our commercial-grade service requires no construction, trenching, or reliance on other carriers, there are no installation delays typical of telecom services like VPNs.

Connecting to your network is simple with our Ethernet hand-off. We offer two types of private networking connections depending on your network configuration. If the same IP subnet addressing is used for all your locations, our Layer 2 Private Network service is the right solution. Our Layer 3 service is ideal when different IP subnets are utilized. Both provide high reliability and privacy for your data without the need for any additional equipment to buy or manage. With the use of QoS, traffic is prioritized to meet your network requirements.

FEATURES

Scalable Bandwidth

VPN Service Type

Layer 3 Uplink Protocol

QoS

Interface

Service Level Agreement

SPECIFICATIONS

Tiered bandwidth up to GigE

Layer 3 VPN or Layer 2 P2P VPN

Direct Connected, OSPF, BGP, Static Routes

802.1p traffic prioritization

RJ-45 10/100/1000 BaseT Ethernet

Bandwidth: 100% CIR
Uptime: ≥99.99%
Latency: ≤50ms
Packet Delivery: ≥99%

The Skyriver high performance guarantee.

Engineered for maximum dependability, our Private Network service delivers premium commercial-grade performance. MPLS and end-to-end QoS improve latency and user experience for higher prioritized traffic such as VoIP. Our industry-leading SLA and 30-Day Customer Assurance Guarantee underscore our commitment to quality.
